

IDHB

More equipment and training to prevent infectious diseases

PROJECT TITLE IDHB – Infectious diseases have no borders

IMPLEMENTATION PERIOD 01.09.2019 – 28.02.2022

ORGANISATIONS INVOLVED Szabolcs-Szatmár-Bereg County Hospitals and University Hospital (HU);
Regional Children's Hospital (UA);
Regional Clinical Infectious Hospital (UA)

PROGRAMME Hungary - Slovakia - Romania - Ukraine
ENI CBC 2014-2020

TOTAL BUDGET 1.109.776,38 €

Reducing from five days to a few hours the identification of a dangerous infectious pathogen. This is the main objective of the IDHB project. To achieve that, the partners are improving the materials and technical devices of the infectious departments of three different hospitals involved, they are modernising and equipping the bacteriological laboratories and the intensive care ward and they are investing in different disinfecting facilities. The repairment of the water supply and sewage system of the hospitals is also foreseen as part of the project activities. These improvements reduce the spread of infectious pathogens, both internally in the hospitals and to the outside world, via the rivers and city sewage. Lastly, the project partners have organised practical training programmes on the identification of infectious pathogens for the medical staff of the relevant hospitals' departments.
